

Preventive Services for all Adults, Women and Children

- Your Bywater Medical Plan provides Preventive Care for children and adults.
- Preventive care is required by Health Care Reform legislation and may be referenced here: <https://www.healthcare.gov>
- These services are free only when delivered by a doctor or other provider in your plan's network. Plans must cover the following list of preventive services without charging you a co-payment or coinsurance. This is true even if you haven't met your yearly deductible.
- Preventive care benefits can be used to detect health issues earlier. These services include office visits for preventive care, well child exams, well adult exams, laboratory tests, x-rays, immunizations, mammograms, and other services required by applicable law.
